The journal Perspectives on Psychological Science invites proposals for Registered Replication Reports as well as applications for funding to support participating labs.

Funding is available to cover expenses such as:

- Subject testing fees
- Trained research assistants
- Programming
- Statistical analysis
- Methodology development
- Materials
- Scanner time
- Access to equipment
- Translation of materials
- And more!

Registered Replication Reports are published replications by multiple labs of important experiments in psychological science. For more information and to inquire about possible financial support go to:

www.psychologicalscience.org/replication

**Fred Kavli Keynote Address and Opening Ceremony**

6:00 PM – 8:00 PM | Broadway Ballroom

**Fostering ATTENTION for Human Needs**

**Michael I. Posner**

University of Oregon

**CO-AUTHOR:** Mary K. Rothbart

University of Oregon

At the turn of the 20th century, attention was seen as the central topic in human psychology. One hundred years later, attentional networks involved in the selection of information, the maintenance of alertness, self-control, and the management of emotions have been explored using brain imaging. Understanding attention has become central to managing our electronic devices, raising our children, and obtaining the most from reading, listening, and searching in our connected world. This talk will review the connection of the brain’s attention networks to early development of self-regulation in children, understanding issues in psychopathology, and training the brain to improve learning and to foster self-control among adults in our highly connected world.
