9:00 AM – 9:50 AM | Astor Ballroom

**Suicide: Where We Are, Where We’re Going, and What’s Keeping Us From Getting There**

**Marsha M. Linehan**
University of Washington

There is no area of research that brings a complex array of ethical issues into sharp focus more than conducting treatment trials when the focus is on decreasing suicidal behavior and preventing suicide. Historically, suicidal individuals have been excluded from treatment studies because their inclusion was thought to be unethical, unsafe, or too difficult to manage clinically.

This presentation will discuss where the field of suicide intervention research started, the successes and failures we have encountered thus far, as well as the critical issues that still need to be addressed in order to move the field forward. It will include a summary of the suicide intervention research trials to date and the directions the field is heading toward addressing the complex problem of suicidal behaviors.

Invited Symposium
9:00 AM – 10:20 AM | Empire-Hudson-Chelsea

**The Downsides of Positivity**

**SOCIAL**

**CHAIR:** Kate Sweeny
University of California, Riverside

**PRESENTERS:**

- Kate Sweeny
  University of California, Riverside
- James K. McNulty
  Florida State University
- Gabriele Oettingen
  New York University
- June Gruber
  Yale University

*Gabriele Oettingen will sign copies of her book, Rethinking Positive Thinking: Inside the New Science of Motivation, immediately following this Invited Symposium.*

**PSPI Symposium**

9:00 AM – 10:50 AM | Marquis Salon A

**Psychological Science in the Public Interest**

CHAIR: Elaine F. Walker  
Emory University

The engaging reports in the APS journal Psychological Science in the Public Interest (PSPI) by panels of distinguished scientists of what psychological science tells us about issues of broad public concern. This special symposium features authors of two recent or upcoming PSPI reports.

**PRESENTATIONS:**

- Erasing the Stigma of Mental Illness: What Says the Dodo Bird?  
Patrick Corrigan  
Illinois Institute of Technology

The dodo bird effect has been used by social scientists to, among other things, illustrate unintended consequences of behavioral change efforts. In this presentation, the dodo bird is used as a metaphor for understanding such consequences in efforts meant to erase the stigma of mental illness.

- Is There a Place for Cognitive Style in Cognitive Psychology and Neuroscience? Issues in Definition and Conceptualization  
Maria Kozhevnikov  
Harvard University

There is a strong need for an update of current style theories in both cognitive neuroscience and applied fields. I will provide the critical perspectives of the current state of cognitive style research from different research traditions as well as redefine cognitive style as culture-sensitive patterns of cognitive processing.

---

**Invited Symposium**

9:00 AM – 10:20 AM | Duffy-Columbia

**The Science of Prevention and Intervention With Children and Families**

DEVELOPMENTAL
CHAIR: Elizabeth T. Gershoff  
University of Texas at Austin

**PRESENTERS:**

- Simine Vazire  
University of California, Davis
- Richard E. Lucas  
Michigan State University
- Wiebke Bleidorn  
Tilburg University, The Netherlands
- Brent W. Roberts  
University of Illinois at Urbana-Champaign
Societies and organizations establish rules to govern behavior and provide standards for right and wrong. If the rules are so clear, then why do we have such an overburdened legal system? Issues of morality, self-control, persuasion, need to belong, and others abound in determining licit and illicit behavior, thereby highlighting the centrality of psychological science in understanding how individuals become involved in the legal system. In addition, a myriad of psychological factors influence decisions about competency to stand trial, sentencing, and verdicts from juries in courtrooms every day. Speakers in this exciting cross-cutting symposium offer new insights into perennial problems for legal systems that attempt to establish more order than disorder.

Why Confessions Trump Innocence: A Social-Psychological Analysis
Saul Kassin
Williams College and John Jay College of Criminal Justice

As seen in numerous wrongful convictions, false confessions often trump factual innocence. To explain why, research will be presented indicating that false confessions are powerfully persuasive as a matter of common sense; they contain credible narratives, suggesting guilty knowledge; they corrupt other evidence, producing an illusion of support; and they undermine the truth-seeking process. In addition to reforming police interrogation practices to curb false confessions, measures to minimize their rippling consequences will be discussed.

The Psychology of Deception Detection: Lies, Fictions, and Truth
Maria Hartwig
John Jay College of Criminal Justice

This talk will provide an overview of research on lie detection. It will draw on social, cognitive, and forensic psychology to understand human lie detection. In particular, the talk will focus on flawed methods used in practice and how scientific research can provide the basis for more effective approaches.
Special Event

9:00 AM - 11:20 AM | Winter Garden-Palace

**AAALAC International Accreditation of Animal Research Programs; Value Added for Science and Welfare**

Bringing Intelligence to Life

Ian J. Deary
The University of Edinburgh, United Kingdom

This talk will address (1) which factors in the life course contribute to intelligence differences in older age and (2) how and why intelligence in childhood associates with life-course health, illness, and longevity. Many of the results are based on follow-up studies of the Scottish Mental Surveys of 1932 and 1947, in which Scotland’s Council for Research in Education tested the intelligence of the whole nation, twice. Deary and collaborators used the data for two programs of work, in cognitive aging and in cognitive epidemiology. Deary et al. sometimes found that preconceptions of the causal direction between life and intelligence were wrong: Intelligence-life associations are not as tractable as Deary et al.’s two, conceived-as-separate research programs presumed.

Invited Symposium
11:00 AM – 12:20 PM | Odets

Neuronal Dynamics of Perception and Cognition

Strangers to Ourselves: The Limits of Self-Knowledge

Timothy D. Wilson
University of Virginia

The study of self-knowledge — how well people know their own attitudes, beliefs, feelings, motives, and traits — has had a checkered history in psychology but has become a well-researched topic with important theoretical and practical implications. Researchers have examined three types of self-knowledge: recalling one’s past self (e.g., past attitudes and beliefs), knowing one’s present self (e.g., current internal states), and predicting one’s future self (e.g., emotional reactions to future events). Wilson will discuss the limits of each type of self-knowledge, why people sometimes fail to know themselves, and the consequences (good and bad) of poor self-knowledge.

Living in Pasteur’s Quadrant: Navigating the Uncharted Waters Between Basic and Applied Research

Robert M. Golinkoff
University of Delaware

Kathy Hirsh-Pasek
Temple University

How can psychological researchers balance the need to do basic science with their desire to be relevant to the questions and issues of their time? In his classic book, Pasteur’s Quadrant: Basic Science and Technological Innovation, Donald E. Stokes proposes an answer. Cross-cutting two dimensions — a quest for understanding and considerations of use — Stokes offers four quadrants that capture the areas of scientific progress. Pasteur’s quadrant contains “use-inspired” research that enhances our basic understanding of scientific phenomena at the same time that it offers answers to practical, real-world problems. In this talk, signaling a migration toward Pasteur’s quadrant, we offer examples of how our own work in language, literacy, and playful learning fits there. We also caution that in a world filled with social media and distorted messages about our science and its use, we need to jump beyond Pasteur’s quadrant and take dissemination of our work seriously. We challenge the field and our institutions to share our science in a way that preserves its integrity and increases its utility for the wider community. We offer several examples of our attempts to do that through traditional and nontraditional means.

### Gesture as a Mechanism of Change

**Susan Goldin-Meadow**
University of Chicago

The spontaneous gestures that people produce when they talk can index cognitive instability and reflect thoughts not yet found in speech. But gesture can go beyond reflecting thought to play a role in changing thought. Goldin-Meadow considers whether gesture brings about change because it is itself an action and thus brings action into our mental representations. She provides evidence for this hypothesis but suggest that it’s not the whole story. Gesture is a special kind of action — it is representational and thus more abstract than direct action on objects, which may be what allows gesture to play a role in learning.

**METHODOLOGY**

CHAIR: Roberta L. Klatzky
Carnegie Mellon University

**PRESENTERS:**

Roberta L. Klatzky
Carnegie Mellon University

Simine Vazire
University of California, Davis

Sean P. Mackinnon
Dalhousie University, Canada

Zoltan Dienes
University of Sussex, United Kingdom

Invited Address

4:30 PM – 5:20 PM | Majestic-Music Box

**The Illusion of Determinism**

**INDUSTRIAL/ORGANIZATIONAL**

Edwin A. Locke
University of Maryland, College Park

APS-Psychonomic Society W.K. & K.W. Estes Symposium

5:00 PM – 5:50 PM | Astor Ballroom

**This is Your Mind on Technology**

Jeffrey Y. Lin
Riot Games

Daphne Bavelier
University of Rochester and University of Geneva, Switzerland

This symposium is part of an initiative to celebrate William K. and Katherine W. Estes’ tremendous contributions to psychological science. The initiative is supported by the APS-Psychonomic Society W.K. & K.W. Estes Fund. Learn more at [www.psychologicalscience.org/caps](http://www.psychologicalscience.org/caps).

Coffee Break

5:30 PM – 6:00 PM
6th Floor

The Convention Continues ...

Find encore performances by these APS Convention speakers on the APS website:

- Daphne Bavelier
- Clancy Blair
- BJ Casey
- Ian J. Deary
- Frans B.M. de Waal
- Angela L. Duckworth
- Nancy Eisenberg
- Ruth Feldman
- Ellen Frank
- Michael S. Gazzaniga
- Susan Goldin-Meadow
- Roberta M. Golinkoff
- Kathy Hirsh-Pasek
- Joseph E. LeDoux
- Jeffrey Y. Lin
- Marsha M. Linehan
- Steven A. Pinker
- Michael I. Posner
- Robert M. Sellers
- Timothy D. Wilson

For posters and full program details, use the 2015 APS Convention App or visit [www.psychologicalscience.org/convention](http://www.psychologicalscience.org/convention)
Introduced in 1989 with scientists and engineers in mind, JMP® software links powerful statistics to interactive graphics. It keeps data in flow, no matter whether it’s small, tall or wide. Because there is a graph for every statistic, you can pursue your analysis without restraint. A sampling of its capabilities:

- Regression, GLM and ANOVA
- Generalized Regression: Ridge, Lasso, Elastic Net*
- Mixed Models and Repeated Measures*
- Univariate and Bivariate Analysis
- Multivariate Analysis
- Data Mining Capabilities: Cross-Validation, Multi-Layer Neural Networks, Bootstrap Forests, Gradient-Boosted Decision Trees, Model Comparison*
- Nonlinear Modeling
- SAS® R, MATLAB and Microsoft Excel Connections
- Time Series Analysis
- Design of Experiments
- Consumer and Market Research Methods
- Categorical Data Analysis
- Reliability and Survival Analysis
- Quality and Process Control
- One-Click Bootstrap*
- Data Visualization, Mapping and Animated Graphs

*JMP Pro Only

Bring the Family Address

6:00 PM – 7:00 PM | Broadway Ballroom

Humans as Animals: Politics, Culture, and Morality

Frans B.M. de Waal
Emory University

There remain few areas of social life for which science has not uncovered major continuities between the behavior of humans and that of other primates, including politics, culture, and morality. Over the last few decades, the consensus has moved from human uniqueness in all of these domains to fundamental similarity. Our socio-emotional mind is essentially a primate mind. In this lecture, deWaal will review similarities in power politics, transmission of knowledge and habits, and moral prerequisites, such as empathy and the sense of fairness. Based on research conducted by his team at the Yerkes National Primate Research Center and elsewhere, the focus will be on specific, well-defined behavioral mechanisms that permit the complex social organization and cooperation observed in monkeys, apes, and humans.

Frans B.M. de Waal will sign copies of his book, The Bonobo and the Atheist, immediately following his Bring the Family Address.

Saturday Night Reception

7:00 PM – 8:30 PM | 9th Floor Upper Terrace and Promenade

The APS Saturday Night Reception is a wonderful opportunity to renew acquaintances and network with colleagues. Light hors d’oeuvres will be served.

REACH THE WORLD OF PSYCHOLOGICAL SCIENTISTS

ASSOCIATION FOR PSYCHOLOGICAL SCIENCE

www.psychologicalscience.org/jobs
The APS Janet Taylor Spence Award recognizes transformative early career contributions to psychological science. Award winners are among our most creative and promising investigators whose work embodies the future of psychological science.
