

Inside the Psychologist's Studio: Steven Pinker

December 03, 2015

Steven Pinker is widely regarded as one of the world's most influential scientific scholars. His work has spanned visual cognition, children's language development, the neural bases of words and grammar, and the psychology of cooperation and communication. And in a new installment of Inside the Psychologist's Studio, Pinker reflects on his storied career in psychological science. The interview with psychiatrist and author Sally Satel was recorded live at the 2015 APS Annual Convention in New York City.
