

# Laptop Note-Taking: External Brain-Booster or Memory Drain?

September 11, 2014

## ***Education Week:***

As more and more districts roll out 1-to-1 laptop and tablet initiatives, new research suggests students may be better off sticking to traditional pen and paper longhand for taking and studying notes.

In a series of experiments published in the June edition of *Psychological Science*, Pam Mueller of Princeton University and Daniel Oppenheimer of the University of California Los Angeles found that students taking notes on a laptop could include more material—but that wasn't necessarily a good thing.
