

# In Focus: The Grand Challenges of Psychological Science

December 29, 2021

From the field's most intractable challenges to its most promising frontiers, this issue explores the horizon.

[The Grand Challenges of Psychological Science](#): APS members share what they perceive as the biggest challenges facing the field.

[On the Right Side of Being Wrong](#): Spurred by the so-called replication crisis, researchers are embracing a new culture of transparency.

[Ships at Sea: Exploring the Mysteries of Self and Consciousness](#): Psychological scientists explore the myriad ways consciousness affects us.

[Up-and-Coming Voices](#): Previews of research by early-career psychological scientists on methodology and research practices.

[Fully Credited](#): A new model of “contributorship” addresses the marginalization of early-career researchers in publishing..

[Psychological Science Needs the Entire Globe, Part 3](#) (series conclusion): Does psychological science even *deserve* brilliant researchers from outside North America and Europe?
