

2012 Convention Video: Schizophrenic Patients and Self-Concept

May 27, 2012

Hi I'm Fahad Rahman from Teachers College, Columbia University and I presented my research at the APS 24th Annual Convention in Chicago, Illinois, USA.

This poster examines the self-reference memory effect (SRM) in schizophrenic patients as it plays an important role in social- and self-cognition. Schizophrenic patients show a lack of SRM, which points to a deficit in their self-schema, and thereby helping us to design more effective treatment plans for them.
